Professional Summary

I am a B.Sc. CSIT candidate with a strong interest in Software Quality Assurance and Quality Control. Through academic projects and a recent IT internship, I have developed a basic understanding of software development processes, testing methodologies, and quality standards. I have experience in performing functional testing, validating application features, identifying defects, and ensuring software reliability. My technical background includes working with SQL for data validation and Python for ETL pipelines and basic automation for background task processing. I am detail-oriented, analytical, and eager to contribute to delivering high-quality software products as a QA professional.

Technical Expertise

- **Database:** PostgreSQL, MySQL
- **Languages:** Python, HTML/CSS
- **Frameworks/Tools:** FastAPI, Microsoft Excel
- **Testing Skills:** Manual testing, Test cases design, SDLC understanding, Bug reporting and tracking, Test scripting with Playwright
- **Testing Tools:** Postman, Jira
- **Version Control:** Git, GitHub

Professional Experience

I. Database Management and Python Development Internship Machhapuchhre Bank

November, 2025 – February, 2026

- Completed a 3 months internship in database management and python development
- Worked with PostgreSQL for database management and data querying
- Implemented CRUD operations using Python and FastAPI, interfacing with PostgreSQL databases
- Built ETL pipelines and performed background processing task using Celery

Education

Bachelor in Science, Computer Science and Information Technology
(2021 – 2026)
Tribhuvan University, New Summit College, Shantinagar, Kathmandu.

Higher Secondary Education
(2019 – 2021)
Kathmandu Model College

Secondary Education (SEE)
(2019)
Adarsha Vidya Mandir H.S.S

Personal Projects

I. File Transfer Automation System (Python, Celery)

- Developed an automated file transfer solution with task scheduling using Celery.
- Integrated Redis for worker queue management and automated watchers for file monitoring.

II. ETL Pipeline Script

- Created a high performance ETL script to migrate dataset of 10,000+ records into PostgreSQL with data cleaning logic.

III. Automated Signup Workflow (TypeScript, Playwright)

- Automated a multi-step signup workflow using Playwright with TypeScript.
- Implemented Page Object Model(POM), dynamic test data generation with Faker and email OTP verification via Mail.tm.

IV. IdeaFlux

- Built a blogging system with recommendation feature as my final year project.
- Used MERN stack with MongoDB as the primary database for creating this system.

Soft Skills

Technical Communication: effectively communicate technical concepts to both technical and non-technical audiences

Time Management: demonstrate ability to prioritize tasks and meet deadlines efficiently

Logical thinking and Creativity: apply problem solving technique with practical solutions

Team Co-ordination: collaborate effectively with team members to achieve common goals and achieve smooth workflow
